Average age of vines: 30 years

Average yield per hectare: 70/80 q

Alcohol content: 12,5%

The attention in producing our wines starts from the vineyard, first of all respecting the biodiversity present in our vineyards. The use of biological treatments based on sweet orange peel extract allows to act only on the organisms harmful to the vine while safeguarding the "good" insects. This product is sprayed on the plant, on the leaves, on the bunch, forming an oily patina which protects the vine from a series of pathologies
